Topic Break Down

Topic	No. of Questions
Topic 1, Exam Pool A	168
Total	168

QUESTION NO: 1

What happens if the Maximum data streams property is enabled for a particular client?

- A. NetBackup ignores Maximum jobs per client and uses either Limit jobs per policy or Maximum indexing jobs per indexing server, whichever is lowest
- B. NetBackup ignores Maximum jobs per client and uses either Maximum data streams or Limit jobs per policy, whichever is lowest
- C. NetBackup ignores Maximum indexing jobs per indexing server and uses Maximum jobs per client or the Limit jobs per policy, whichever is lowest
- D. NetBackup ignores Limit jobs per policy and uses either Maximum data streams or Maximum jobs per client, whichever is lowest

ANSWER: B**QUESTION NO: 2**

In the NetBackup Administration Console or Java console, how should an administrator change a disk pool to down status?

- A. Device Monitor > Disk Pools > right-click and select Down Disk Pool
- B. Devices > Disk Pools > right-click and select Down Disk Pool
- C. Credentials > Storage Servers > right-click and select Down Disk Pool
- D. Media and Device Management > Devices > Disk Pools > right-click and select Down Disk Pool

ANSWER: A**QUESTION NO: 3**

A restore must be performed. An administrator is attempting to view the valid images for a client, but the following error occurs:

WARNING: Server does not contain any valid images.

Which two parameters may be configured incorrectly? (Select two.)

- A. Schedule type for restores
- B. Destination client for restores
- C. Server to use for backups and restores
- D. Media Server for backups and restores

E. Policy type for restores

ANSWER: C E

QUESTION NO: 4

A new storage shelf is added to an existing appliance.

Which command under Manage > Storage must the administrator perform first after a new shelf is connected to the appliance and the appliance is powered on?

- A. Add operation to add a new disk
- B. scan operation to scan for new slot age
- C. Resize operation to resize the data partitions
- D. Partitions operation to define the data partitions

ANSWER: B

QUESTION NO: 5

What are two possible causes for job failure when a Windows policy is configured to use Accelerator? (Select two.)

- A. client-side deduplication is disabled
- B. use of the NTFS Change Journal is disabled
- C. the backup target is AdvancedDisk
- D. insufficient space in the NetBackup installation directory
- E. the policy lacks a forced rescan schedule

ANSWER: C D

QUESTION NO: 6

Which two actions should an administrator take to allow NetBackup to manage the allocation of volumes to volume pools? (Select two.)

- A. define a scratch pool and add all of the volumes to it so NetBackup will move volumes to the other pools as volumes are needed
- B. assign volumes to all volume pools as required in the environment
- C. define a scratch pool with assigned volumes so NetBackup will move the assigned volumes to other pools as volumes are needed

- D. create volume pools as required, but refrain from adding volumes to the pools
- E. assign volumes to NetBackup and DataStore volume pools so NetBackup will move the assigned volumes to other pools as volumes are needed

ANSWER: A D

QUESTION NO: 7

What is the primary purpose of implementing load balancing Media Servers with Netbackup appliances?

- A. to distribute the deduplication storage and increase the overall capacity of the MSDP pool
- B. to offload the deduplication processing and reduce the network impact on the appliance
- C. to offload the deduplication processing and reduce the CPU and RAM requirement on the appliance
- D. to distribute the deduplication processing and increase the rehydration performance when restoring data

ANSWER: C

QUESTION NO: 8

An organization needs to have backups span between different BasicDisk storage units. The "Allow backups to span disk" setting has been enabled in Host Properties.

Which additional requirement must an administrator meet to allow backups to span disks?

- A. enable the "Enable standalone drive extension" setting in host properties
- B. put the BasicDisk storage units in a storage unit group
- C. create a disk pool with all the appropriate disk volumes
- D. configure the Media Server as a Storage Server

ANSWER: B

QUESTION NO: 9

In which two places can an administrator view the available space for a Media Server Deduplication Pool? (Select two.)

- A. Reports > Disk Reports > Images on Disk
- B. Device Monitor > Disk Pools
- C. Reports > Disk Reports > Disk Logs
- D. Devices > Disk Pools

E. Reports > Disk Reports > Disk Pool Status

ANSWER: D E

QUESTION NO: 10

Which two conditions must be met to change the volume group of a tape? (Select two.)

- A. backup tapes must be in the same library or standalone
- B. backup tapes must have barcode labels
- C. backup tapes must be unassigned
- D. backup tapes must be vaulted
- E. backup tapes must have the same media type

ANSWER: A E
