**QUESTION NO: 1**

According to IBM recommendations, which database column does NOT need to be indexed in order to improve the performance of the IBM FileNet Content Platform Engine database?

- A. mime\_type
- B. security\_policy\_id
- C. tail\_id and head\_id
- D. element\_value

**ANSWER: D****QUESTION NO: 2**

What is Administration Console for Content Platform Engine (ACCE) replacing?

- A. System Manager
- B. Configuration Manager
- C. Deployment Manager
- D. FileNet Enterprise Manager

**ANSWER: D****QUESTION NO: 3**

P8 follows industry practices in separating authentication (validating the identity of users) from authorization (controlling access to resources for identified users). Which of the following is TRUE for P8's handling of authentication and authorization?

- A. Authentication is handled by the application server. Authorization is handled by P8.
- B. Authorization is handled by the application server. Authentication is handled by P8.
- C. P8 can handle authentication if the Password Synchronization feature is enabled.
- D. The Old Dogs New Tricks (ODNT) policy mechanism can be used to supplement the internal P8 authorization calculations.

**ANSWER: A**

**QUESTION NO: 4**

What tool is NOT used during export/import of Process Engine assets?

- A. FileNet Deployment Manager
- B. FileNet Process Administration Console
- C. FileNet Process Task Manager
- D. FileNet Process Designer

**ANSWER: B****QUESTION NO: 5**

Which of the following is the current framework recommended by IBM for building rich interactive web-based content applications?

- A. IBM Rational Data Architect.
- B. Workplace Web Application Toolkit (WAT).
- C. Administration Console for Content Platform Engine (ACCE).
- D. IBM Content Navigator (ICN).

**ANSWER: D****QUESTION NO: 6**

An IBM FileNet Administrator is deploying an application from a source environment to a destination environment for the first time. To do this, the administrator must perform several steps to set up the deployment configuration and define the relationship between the two environments. Which one of the following is NOT a step in this process?

- A. Set up the pair definition.
- B. Set up the converted queue definition.
- C. Set up the source environment definition, then define the connection to the source environment, setting the URL of the source Content Engine from which you will export objects.
- D. Set up the destination environment definition, then define the connection to the destination environment, setting the URL of the destination Content Engine to which you will import objects.

**ANSWER: B****QUESTION NO: 7**

Which is the best way for custom applications to get information at runtime about the data model of a P8 system?

- A. Read the repository database schema and mapping the table and column names to classes and properties.
- B. Use P8 APIs to examine metadata objects like Class Descriptions and Property Descriptions.
- C. Study IBM FileNet product documentation along with custom application functional specifications.
- D. Use IBM InfoSphere Master Data Management tools to discover relationships and data types.

**ANSWER: B**

#### QUESTION NO: 8

A business process application package usually contains Content Engine artifacts, Process Engine artifacts, non-FileNet artifacts and instructions for how to import and deploy them What else might it contain?

- A. Content Search Indexes
- B. Workflow data
- C. Export Manifest
- D. Process configuration export

**ANSWER: D**

#### QUESTION NO: 9

IBM FileNet Process Designer is the tool used to create work flow definitions. This tool also provides access to other commonly used tools, provided you have the proper access rights. What are the proper access rights?

- A. Process Administration, Process Analyzer, and Simulation
- B. FileNet Enterprise Manager, Process Administration, Process Configuration
- C. Process Configuration, Process Administration, and Simulation
- D. Process Configuration, Process Administration, Process Analyzer, and Simulation

**ANSWER: C**

#### QUESTION NO: 10

Which is NOT a characteristic of a workflow definition?

- A. It is a graphical map showing the sequences of steps needed to complete the business process
- B. Contains roles to specify which users can access specific types of work flows

**C.** It is a specification of each step, including who will process the work for the step, which step processor application the participant will use, which attachments are required, what data is necessary, what responses the participant can choose, and other options.

**D.** Contains routing logic that specifies how work advances from one step to the next

**ANSWER: B**
