**QUESTION NO: 1**

(single) 1518 byte Ethernet data packets are converted into ATM cells by 1483 b format encapsulation, how many ATM cells will be converted?

- A. 27
- B. 28
- C. 29
- D. 32

**ANSWER: D**

**QUESTION NO: 2**

(multiple) Regarding super vlan, what are the following statements correct?

- A. Super VLAN aggregates multiple sub VLANs
- B. Super VLAN corresponds to a routing interface
- C. Sub VLAN uses Super VLAN together.
- D. The main purpose of Super VLAN is to save IP addresses.

**ANSWER: A B C D**

**QUESTION NO: 3**

(Multiple) The MA5600 system comes with 4 default ADSL line profiles. Which of the following templates are available when the system is shipped from the factory?

- A. 1
- B. 2
- C. 1001
- D. 1002

**ANSWER: A C D**

**QUESTION NO: 4**

(single) Is the following description correct? Triple Play refers to multiple different service access modes on one subscriber line.

- A. True
- B. False

**ANSWER: A**

**QUESTION NO: 5**

(multiple) UA2000 alarms are based on whether they are acknowledged and cleared. What are the alarm statuses?

- A. Unconfirmed not cleared
- B. confirmed not cleared
- C. Unconfirmed cleared
- D. Confirmed cleared

**ANSWER: A B C D**

**QUESTION NO: 6**

Which of the following methods does the (multiple) VLAN division?

- A. Based on the port
- B. Based on MAC address
- C. Based on the agreement
- D. Based on physical location

**ANSWER: A B C**

**QUESTION NO: 7**

(multiple) What remote acceptance functions can the MA5600T/MA5680T provide?

- A. PPPOE simulation test
- B. DHCP simulation test
- C. Voice call simulation test
- D. BTV simulation test

**ANSWER: A B C D****QUESTION NO: 8**

(multiple) When the MA5600T is newly deployed and connected to the network management, what are the following descriptions correct?

- A. The IP address of the interface used by the A.MA5600T must be on the same network segment as the network management IP address.
- B. The SNMP version should be configured the same as the U2000 side.
- C. The configuration of reading the community name and the writing community name is the same as that of the network management side.
- D. Add a static route, the destination address is the network segment where the network management IP is located.

**ANSWER: B C D****QUESTION NO: 9**

(single) Which of the following boards can provide 32 ADSL2+ interfaces and 32 POTS interfaces at the same time?

- A. A32
- B. ADRB
- C. CSR B
- D. ADRI

**ANSWER: C**

**QUESTION NO: 10**

(single) Is the following description correct? The MAC address consists of 48 bits, usually expressed in

12- digit hexadecimal. The first 6 hexadecimal digits are uniformly distributed by the IEEE to determine the uniqueness of the vendor. The last 6 hexadecimal digits are managed by each vendor.

- A. True
- B. False

**ANSWER: A****QUESTION NO: 11**

(single) In the GPON network, which of the following is the role of the DBA?

- A. It can improve the uplink bandwidth utilization of the PON port.
- B. Can improve the downlink bandwidth utilization of PON ports
- C. You can add more ONUs to the PON port.
- D. Increased PON port upstream bandwidth

**ANSWER: A****QUESTION NO: 12**

(multiple) When configuring the multicast service on the MA5600T, which of the following options must be configured, otherwise the multicast program may not be viewable?

- A. igmp user
- B. igmp program
- C. igmp profile
- D. Multicast VLAN

**ANSWER: A D****QUESTION NO: 13**

(single) In the Solaris vi editor, how to discard the edited file and exit vi?

- A. :quit!
- B. :q
- C. :exit
- D. :q!

**ANSWER: D**

#### QUESTION NO: 14

(single) MA5600T/MA5680T one-pack loading mode can be uniformly loaded into the OLT device by grouping multiple files into one package file, which can greatly reduce the upgrade complexity of the OLT device. Which of the following options cannot be uniformly loaded by the unified package tool? ?

- A. Target version Main package
- B. Post-upgrade patch file
- C. Source version upgrade special patch
- D. Source version SPH/SPC patch

**ANSWER: D**

#### QUESTION NO: 15

(single) Regarding EPON, which of the following descriptions is incorrect?

- A. The EPON standard is one of the many TDM-PON standards. It has the basic characteristics of the TDM-PON network: the tree topology network consists of three parts: the OLT, the ONU, and the ODN (Optical Distribution Network).
- B. On the logical topology, the EPON protocol establishes a logical link for the OLT to each ONU. The leading byte of the Ethernet data frame carries the logical link identifier, that is, LLID (Logical Link Identity).
- C. The downstream data stream from the OLT to the ONU is encapsulated into an Ethernet message, and the corresponding LLID is appended and transmitted in the tree PON network. The optical splitter in the ODN broadcasts the data stream to each branch, and all ONUs can receive the downlink Ethernet data frame and selectively receive its own data according to the LLID.
- D. From the ONU to the OLT in the uplink direction, each ONU uses the broadcast mode to share the uplink bandwidth.

ANSWER: D
