QUESTION NO: 1

What is the least error-prone way to split a long list into two lists?

- A.** Create an empty second list, copy selected list items from the first to the second list, and then remove the copied items from the first list.
- B.** Create two new lists, copy list items from the initial list to the first, copy the remaining list items from the initial list to the second list, and then delete the initial list.
- C.** Create an empty second list, manually re-create the needed list entries, and then remove the matching list from the first list.
- D.** Copy the entries list, grid edit the copied list and remove entries that are not needed, and then grid edit the first list and remove the entries that are now in the second list.

ANSWER: C**QUESTION NO: 2**

You have defined a form page on the ORDERS table and changed page item :P5_ORDER_TOTAL to type Hidden.

You also created a dynamic action to update the value of :P5_ORDER_TOTAL when any order items are added, updated, or deleted on the page.

However, when you submit the page, you get this error:

Session state protection violation: This may be caused by manual alteration of protected page item P5_ORDER_TOTAL. If you are unsure what caused this error, please contact the application administrator for assistance.

How should you update :P5_ORDER_TOTAL page item to prevent this error?

- A.** Set Value Protected to "No."
- B.** Set Session State Protection to "Unrestricted."
- C.** Change the Item type to "Display Only."
- D.** Set Store value encrypted in session state to "Yes."

ANSWER: D

QUESTION NO: 3
