QUESTION NO: 1

A system administrator wants to configure a SAN folder to store User Documents. The administrator wants to use NTFS to allow all users access to the QlikView documents.

Which permission should the administrator grant on the SAN folder?

- A. Execute
- B. Read & execute
- C. Write
- D. Allow

ANSWER: B**QUESTION NO: 2**

The QlikView Distribution Service fails to allocate a QlikView Batch (QVB) engine. The system administrator needs to monitor the QlikView Publisher for 24 hours to determine if the current QlikView Publisher schedule has over-allocated QVB engines.

Which two tools should the administrator use? (Select two)

- A. Wireshark
- B. HTTP Watch
- C. Microsoft Task Manager
- D. QlikView Governance Dashboard
- E. Microsoft Performance Monitor

ANSWER: C D**QUESTION NO: 3**

A system administrator configures a new QlikView Server node to integrate with an existing QlikView Server environment

Which port number does the system administrator need to ensure is open for communication with the existing QlikView Management Console?

- A. 4750
- B. 4747

C. 4720

D. 4780

ANSWER: B

QUESTION NO: 4

A system administrator is testing a QlikView Server where the Publisher is also licensed After completing the testing phase, the system administrator wants to copy all tasks from the test environment to the production environment.

What should the system administrator do?

- A. Create a triggered task that will export all tasks from the test environment and import these tasks in the production environment using Task Dependencies
- B. Export the tasks from the test environment using the QlikView Management Console and use the Paste icon to import the tasks into the production environment
- C. Use the Remote Management Service to set up a link in the test environment towards the production environment and push the tasks to the production environment.
- D. Use the Remote Management Service to set up a link in the production environment towards the test environment and pull the tasks into the production environment.

ANSWER: B

QUESTION NO: 5

A system administrator is configuring a two node QlikView Server cluster and will install QlikView Publisher on its own separate node. The configuration of services is as follows:

Node A QlikView Server service, QlikView Management service Node B QlikView Server service, QlikView Management service Node C QlikView Distribution service QlikView Settings service QlikView Directory Service Connector service.

Which part of this configuration does NOT conform to best practices?

- A. Running two simultaneous QlikView Server services on separate nodes
- B. Running two simultaneous QlikView Management services on separate nodes
- C. Running the QlikView Server service and QlikView Management service on the same node
- D. Running the QlikView Distribution service and the QlikView Directory Service Connector service on the same node

ANSWER: B

QUESTION NO: 6

For which two tasks is the QlikView Server service responsible? (Select two)

- A. Authenticating Custom Users
- B. Loading selected QlikView User Documents into RAM
- C. Reloading QlikView documents when no QlikView Publisher license has been applied
- D. Authorizing document administrators to access the QlikView Management Console
- E. Performing calculations when users make selections in a document containing expressions

ANSWER: D E

QUESTION NO: 7

All QlikView Server services are installed and configured to run on a single Windows server QlikView Publisher tasks fail intermittently, and the document log appears to stop processing without any error notifications.

To troubleshoot the issue, a Windows Performance Monitor set was configured and shows that the QVS.exe system RAM usage is extremely high QlikView Publisher reload tasks schedule cannot be altered

Which three steps should the system administrator take to resolve the problem? (Select three)

- A. Increase the Windows server system RAM
- B. Increase the Windows server pagefile sys size
- C. Migrate QlikView Distribution Service to a separate Windows server
- D. Decrease the Working Set Low to make sure enough system RAM is available for QlikView Publisher to function
- E. Edit the QlikView Publisher tasks so the distribution is set to All Authenticated Users instead of Named Users

ANSWER: B D E

QUESTION NO: 8

A system administrator needs to open a support case for an issue related to QlikView Distribution Service task failures. The administrator gathers the appropriate QlikView document and task log files for support staff to analyze.

What additional information should the administrator provide for support staff to ensure optimum response and resolution time?

- A. QlikView system information
- B. Example QlikView documents
- C. Example QlikView data files (QVDs)
- D. Meta files related to the failing QlikView documents

ANSWER: B

QUESTION NO: 9

In order to enable Unbalanced QlikView Server Clustering which two files must be edited? (Select two)

- A. C:\ProgramFiles\QlikView\Web\Settings ini
- B. C:\ProgramData\QlikTech\QlikViewServer\Settings ini
- C. C:\Program Files\QlikView\Server\Web Server\Settings.ini
- D. C:\Program Files\QlikView\Management Service\Settings ini
- E. C:\ProgramData\QlikTech\QlikViewServer\Cluster\Settings mi

ANSWER: C D

QUESTION NO: 10

A system administrator reviews the Status > Tasks tab in the QlikView Management Console which displays a failed reload task. Which two logs are needed to troubleshoot the problem? (Select two)

- A. QlikView Root Log
- B. QlikView Task Log
- C. QlikView Document Log
- D. QlikView WorkOrder Log
- E. QlikView Server Event Log

ANSWER: B E
