QUESTION NO: 1

Which transportUri should be used to configure a Flush Agent for a dispatcher listening on localhost port 8000?

- A. <http://localhost:8000/dispatcher/invalidate.cache>
- B. <http://localhost:8000/invalidate.cache>
- C. <http://localhost:8000/dispatcher/cache.invalidate>
- D. <http://localhost:8000/bin/receive>

ANSWER: B**Explanation:**

Reference: <https://helpx.adobe.com/experience-manager/6-3/sites/deploying/using/replication.html>

QUESTION NO: 2

In addition to a manual start, what two triggers can a DevOps Engineer define to start the CI/CD pipeline? (Choose two.)

- A. Scheduled start
- B. Offline start
- C. Offsite start
- D. On Git changes
- E. Data store changes

ANSWER: A D**Explanation:**

Reference: <https://docs.adobe.com/content/help/en/experience-manager-cloud-manager/using/how-to-use/configuring-pipeline.html>

QUESTION NO: 3

What are the two benefits of running the version purge maintenance task? (Choose two.)

- A. Increases the system performance
- B. Compacts disk space for unreferenced versions

- C. Reclaims disk space
- D. Cleans up versions that can not be restored
- E. Removes old versions of packages

ANSWER: C E

QUESTION NO: 4

An html page is published and is accessible through the dispatcher. A client is trying to access the updated page but is not getting the updated content.

- A rule /type "allow" /glob "*.html" is present in the dispatcher /cache /rules configuration
- The HTTP header "Cache-Control: max-age=3600" is set for all requests with the html extension
- The /invalidate section is not set in the dispatcher configuration
- A flush agent is configured on the publish instance
- A CDN is serving all static content including html files and was flushed manually

Why does the content fail to update on the client side?

- A. The file was cached on the client side in the browser cache.
- B. There is no /invalidate section present in the dispatcher configuration to invalidate the updated content.
- C. The flush occurred before the content was replicated because there are a lot of items in the queue.
- D. The content is still cached in the dispatcher after the CDN flush.

ANSWER: C

QUESTION NO: 5

How can the DevOps Engineer prevent any user from logging in with the default admin credentials during startup of the AEM instance?

- A. Update the default password in the OSGi configuration for the OSGi web console
- B. Change the default AEM admin password on initial setup
- C. Configure the dispatcher to prevent access to /system/console
- D. Disable the OSGi web console login bundle by using the production ready runmode

ANSWER: B

QUESTION NO: 6

After which maintenance processes can a datastore garbage collection achieve the most regain of disk space?

- A. Re-index
- B. Compaction
- C. Version purge
- D. Workflow purge

ANSWER: B**QUESTION NO: 7**

A DevOps Engineer has cloned an environment, and configurations must be adjusted for the environment to function correctly. Due to the cloning, the domain and IPs changed during the process.

Specifically for content activation, which two parts of the configurations must be altered? (Choose two.)

- A. The user of the flush agents
- B. The transport URI of the replication agents
- C. The transport URI of the flush agents
- D. The transport URI of the dispatcher configuration
- E. The user of the static content agent

ANSWER: C E**QUESTION NO: 8**

In what two ways can a DevOps Engineer install a content package? (Choose two.)

- A. Store the content package in the crx-quickstart/install folder in the filesystem
- B. Store the content package in the crx-quickstart/app folder in the filesystem
- C. Use CRX Package Manager
- D. Upload the package to /content/dam and start the InstallPackageWorkflow
- E. Upload the package through the OSGi console

ANSWER: A C

Explanation:

Reference: <https://helpx.adobe.com/experience-manager/6-3/sites/administering/using/packagemanager.html>

QUESTION NO: 9

A DevOps Engineer is deploying an AEM environment in a private network.

How can the DevOps Engineer restrict other clients or applications from flushing the cache?

- A.** Set up client certificate authentication in the dispatcher configuration
- B.** Set permissions on the publish instance by using Access Control Lists to allow the publish instance private IPs
- C.** The allowedClients section in the dispatcher configuration should only allow the publish instances private IPs
- D.** Configure the /filter section of the dispatcher configuration with an allow rule to make sure the correct client's private IPs are allowed to flush the cache

ANSWER: A
