QUESTION NO: 1

Which two are NOT true with a Planning and Budgeting Cloud (PBCS) application? (Choose two.)

- A. Three custom planning applications can be Initialized
- B. Four custom reporting applications can be initialized
- C. Approvals is not included
- D. Groovy calculations are available

ANSWER: B C**Explanation:**

B: These are planning applications, not reporting applications.

C: An approval unit is the basic unit for preparing, annotating, reviewing, and approving plan data. Approval units are combinations of scenario, version, and entity or part of an entity. You can have one scenario/version combination per approval unit. Scenarios and versions are the basis of the review cycle. Approval units submit planning data for a scenario and version.

QUESTION NO: 2

If a user needs to be able to perform application administration, as well as assign user security in Enterprise Planning and Budgeting Cloud (EPBCS), which two global roles would need to be assigned to them? (Choose two.)

- A. Service Administrator
- B. Identity Domain Administrator
- C. Approvals Administrator
- D. System Administrator

ANSWER: A B**Explanation:**

A: All Oracle Enterprise Performance Management Cloud services other than Oracle Enterprise Performance Reporting Cloud use a common set of four predefined functional roles to control access to service environments: Service Administrator, Power User, User, and Viewer.

B: Identity Domain Administrator Role

As an identity domain administrator, you use the My Services application to manage your own users and their roles. Your view in the My Services application is limited to the users and roles in the identity domains that you have been assigned to manage. You see all the roles at the domain and service levels.

The identity domain administrator role gives a user the following privileges: Access to all user and role management functions in My Services, including: Managing User Accounts

Adding and Removing Custom Roles

QUESTION NO: 3

What Enterprise Planning and Budgeting Cloud (EPBCS) card in the Application cluster was built to navigate administrators through maintenance activities?

- A. Data Maps
- B. Overview
- C. Settings
- D. Valid Intersections
- E. Configure

ANSWER: C

Explanation:

The Application cluster and these cards in the Application cluster: Settings, Migration

Note: A cluster is a grouping of cards. You must first create a cluster and then you can assign cards to it.

QUESTION NO: 6

Which cannot be pushed between cubes through data maps?

- A. Supporting detail
- B. Data change history
- C. Attachments
- D. Comments

ANSWER: B**Explanation:**

References:

QUESTION NO: 7

If a user is having trouble accessing a specific intersection of data on a form that opens without error, which three actions can an administrator take to help troubleshoot the problem? (Choose three.)

- A. Run a system report on Access Control
- B. Confirm the user's/group's dimension access rights
- C. Set Dimension Administration auditing within System Reports
- D. Run Application Diagnostics
- E. Verify the form permissions

ANSWER: A B D

Explanation:

A: Reporting on Access Permissions

You can view current access permissions and print reports.

To report on current access permissions for users and groups in the application: Etc.

B: You can assign access rights to members, rearrange the dimension member hierarchy, and share members of the Entity, Account, and user-defined custom dimensions.

D: To launch the application monitor:

Click the Navigator icon, and then under Monitor and Explore, click Application Diagnostics.

Etc.
