Topic 2, Volume B	298
Total	378

QUESTION NO: 1 - (DRAG DROP)

DRAG DROP

A backup administrator has configured Dell EMC NetWorker and Data Domain Cloud Tier devices in NMC.

What is the correct process flow of the backup data and control path?

Select and Place:

Answer Area

Backups are sent to the Data Domain system active tier

Application-based policy clones the data from block storage to object storage in the Data Domain storage unit

Backup data is pushed to the cloud provider based on an age policy controlled by the Data Domain system

NetWorker server sends the backup requests to the clients.

STEP 1

STEP 2

STEP 3

STEP 4

ANSWER:

Answer Area

NetWorker server sends the backup requests to the clients.

Backups are sent to the Data Domain system active tier

Application-based policy clones the data from block storage to object storage in the Data Domain storage unit

Backup data is pushed to the cloud provider based on an age policy controlled by the Data Domain system

Explanation:

QUESTION NO: 2

During a scheduled backup, what would EMC NetWorker do if a save set does not explicitly match any pool?

- A. EMC NetWorker sends the save stream to a volume in the Default pool.
- B. EMC NetWorker sends the save stream to a volume in the Backup Clone pool.
- C. EMC NetWorker aborts the backup.
- D. EMC NetWorker aborts the backup and disables the Group.

ANSWER: A

QUESTION NO: 3

When using Microsoft VSS snapshot processing in an EMC NetWorker environment, what is performed by a Writer?

- A. Freezes activity
- B. Requests the shadow copy
- C. Creates the shadow copy
- D. Performs the backup

ANSWER: A**QUESTION NO: 4**

Which Dell EMC NetWorker database tracks detailed information about items backed up in a save set?

- A. Jobs database
- B. Resource database
- C. Media database
- D. Client File Index

ANSWER: D**Explanation:**

Client File Index (CFI): These databases can track each client backup file (path name), allowing users to browse the file backed up in a specific point in time. This information is very important for NetWorker but will not be discussed in this article. If you are interested in it, you can refer to NetWorker Administration Guide for more information about the index

Reference: <https://www.dell.com/community/NetWorker/Explore-the-Detail-of-Bootstrap-and-How-to-Locate-Bootstrap/td-p/6979370>

QUESTION NO: 5

An EMC NetWorker administrator wants to back up only the CFI and the bootstrap save sets.

Which command will achieve this requirement?

- A. savegrp -l full -O group name
- B. save -l full -O group name
- C. savegrp -l full -O group name
- D. save -l full -O group name

ANSWER: A**QUESTION NO: 6**

Refer to the Exhibit.

	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
Level	Full	Incremental	Incremental	Synthetic Full	Incremental	Incremental	Synthetic Full
Size	1.5 TB	200 GB	150 GB		500 GB	100 GB	
Deleted		750 GB				200 GB	

Based on the exhibit, what is the size of the EMC NetWorker synthetic full back up on Saturday?

- A. 1.5 TB
- B. 1.7 TB
- C. 2.45 TB
- D. 2.55 TB
- E. 2.1 TB

ANSWER: A

QUESTION NO: 7

A Dell EMC NetWorker Administrator always wants to perform a backup of the cluster virtual client data to its local storage node device.

How can this be achieved?

- A. List all storage nodes as part of the cluster under the "Storage Node" attribute of the virtual client resource.
- B. Ensure the "Storage Node" attribute under the virtual client resource is blank.
- C. Use the keyword "curphyhost" under the "Storage Node" attribute of the virtual client resource.
- D. Specify the local storage node for all physical client resources in the cluster.

ANSWER: C

QUESTION NO: 8

An EMC NetWorker Administrator needs to restore a client file. However, the save set for that backup is in a recoverable state.

What must be done before performing a browsable recovery?

- A. Rebuild CFI
- B. Change Volume to appendable

- C. Rebuild the Media database
- D. Change retention time

ANSWER: A

QUESTION NO: 9

You are backing up a group of clients that have varying schedules. Using the EMC NetWorker Administration interface, you need to perform a full backup of all clients in that group.

How would you ensure that a full backup is performed for a client when it is backed up during the next save group execution?

- A. Set an override level in the backup schedules to Full in the next date
- B. Change the group level to Override
- C. Uncheck the Force incremental option in the group resource Advanced tab.
- D. Create a staging resource called full and set the destination pool to full.

ANSWER: A

QUESTION NO: 10

What is a characteristic of how the EMC NetWorker modules integrate with native applications?

- A. EMC NetWorker module acts as an intermediate layer between EMC NetWorker and the native application.
- B. The application vendor provides EMC NetWorker module to allow data protection with EMC NetWorker.
- C. EMC NetWorker module runs on EMC NetWorker server and acts as an intermediate layer for backup data from EMC NetWorker client.
- D. EMC NetWorker module runs on EMC NetWorker storage node and acts as an intermediate layer for backup data from EMC NetWorker client.

ANSWER: A

QUESTION NO: 11

Which backup levels are supported for backup of Oracle databases in an EMC NetWorker environment?

- A. Full and Incremental

- B. Full and Levels 1-9
- C. Synthetic full and Incremental
- D. Synthetic full and Levels 1-9

ANSWER: A

QUESTION NO: 12

What is the benefit of using the EMC NetWorker Client Direct feature?

- A. Reduced bandwidth usage
- B. Reduced CPU utilization on the client
- C. Reduced number of full backups
- D. Reduced client disk access

ANSWER: A

QUESTION NO: 13

An EMC NetWorker administrator wants to move NMC from the server where it is currently installed to a new Windows system. The NMC reporting feature is being used.

What must be installed on the new system, in addition to the Console server software?

- A. EMC NetWorker Client software and Java Runtime Environment
- B. Java Runtime Environment and Change Journal Manager software
- C. EMC NetWorker Client software and Change Journal Manager software
- D. EMC NetWorker Storage Node software and Java Runtime Environment

ANSWER: A

QUESTION NO: 14

Which EMC NetWorker resource represents a collection of NetWorker-labeled volumes?

- A. Pool
- B. Volume

- C. Saveset
- D. Media database

ANSWER: A

QUESTION NO: 15

While performing a backup of a database using EMC NetWorker modules, how are consistent backups of a database achieved?

- A. All files are backed up at the same point or state
- B. All files are backed up at the same time
- C. Changes are applied to production data in hot backup mode
- D. Host buffers are flushed to retain the file system online

ANSWER: A
