When deploying east-west network introspection, which Service Virtual Machine (SVM) deployment method achieves the least amount of traffic hair pinning?

- A. Create a secondary vNIC on each guest VM for SVM communication.
- B. Place a partner SVM on each compute cluster node.
- C. Centralize partner SVMs in a service cluster.

D. Add partner SVMs to an edge cluster.

ANSWER: B

Explanation:

"For SVMs deployed on compute hosts, an SVM does not need to be installed on every host.
