QUESTION NO: 1

A network administrator is working on a VMware NSX installation with VM-1000-HV firewalls. The administrator has created a security group that is populated with VMs. The administrator is trying to create a Dynamic Address Group in Panorama, but the security group is not showing.

Which task should the administrator perform first?

- A. Go into vCenter/NSX and push the objects to Panorama
- B. Delete and re-add the security group.
- C. Go into Panorama and synchronize the Address objects with NSX
- D. Check the NSX Security policy to ensure the security group has been used in a policy.

ANSWER: D**QUESTION NO: 2**

What is the major decision factor that customers use when selecting a managed container platform such as AS/EKS/GKE?

- A. licensing costs
- B. enhanced capabilities not available in vanilla K8s
- C. no need to manage containers, just the application code.
- D. reduced operational costs and management overhead

ANSWER: B**QUESTION NO: 3**

Which features are included in the less-expensive license bundle meant for NSX?

- A. capacity license, premium support, a threat prevention subscription, and GlobalProtect
- B. capacity license and premium support
- C. capacity license, premium support and a threat prevention subscription

D. capacity license and a threat prevention subscription

ANSWER: B

Explanation:

QUESTION NO: 4

Which three advantages of the Palo Alto Networks platform architecture are used to enable security orchestration in SDN?
(Choose three)

- A. a full set of APIs enabling programmatic control of policy and configuration
- B. NVGRE support for advanced VLAN integration
- C. integration with leading orchestration platforms: VMware NSX, OpenStack, and Cisco ACI
- D. Dynamic Address Groups to adapt Security policies dynamically
- E. VXLAN support for network-layer abstraction

ANSWER: C D E

QUESTION NO: 5

Which three criteria are required to deploy VM-Series firewalls in High Availability?

(Choose three)

- A. deployed on same type of hypervisor
- B. allocate identical CPU cores and network interfaces
- C. assigned identical licenses and subscriptions
- D. deployed on a different host
- E. configured asymmetric routing

ANSWER: A B C

Explanation:

: In an HA configuration on the VM-Series firewalls, both peers must be deployed on the same type of hypervisor, have identical hardware resources (such as CPU cores/network interfaces) assigned to them, and have the set same of licenses/subscriptions.

<https://docs.paloaltonetworks.com/vm-series/9-0/vm-series-deployment/about-the-vmseries-firewall/vm-series-in-high-availability.html>

QUESTION NO: 6

For which two reasons would an administrator have to install NGFW automatically in a cloud environment? (Choose two)

- A. reduce capital expenses
- B. performance, to be able to install a new firewall when the demand exceeds the ability of the existing environments to service
- C. integrity, to ensure that data is not changed illicitly
- D. resiliency and availability, to be able to install a new firewall as part of a new environment if an existing environment fails
- E. security, to automatically install a firewall when a security threat is detected

ANSWER: B E**QUESTION NO: 7**

Which two design options address split-brain when configuring HA? (Choose two)

- A. Send heartbeats across the HA2 interfaces.
- B. Bundle multiple interfaces in an Aggregated Interface Group and assign HA2.
- C. Use the heartbeat backup.
- D. Add a backup HA1 interface.

ANSWER: C D**QUESTION NO: 8**

What are the differences between Prisma Cloud Enterprise and Prisma Cloud Compute

- A. The only difference is in the architecture - where the Console is hosted
- B. Prisma Cloud Compute offers lowered runtime defensive capabilities because there is no PANW cloud hosted component.

- C. Prisma Cloud Enterprise does not offer workload protection.
- D. Only Prisma Cloud Compute offers API based cloud protection.

ANSWER: C

QUESTION NO: 9

When deploying VM series on Openstack platform, which statement is correct?

- A. Allow configuration of at least one interface
- B. OpenStack compute node could be installed on a hypervisor platform
- C. Accept the VM-Series OVA image
- D. Set Instance type OS::Nova Server

ANSWER: B

Explanation:

QUESTION NO: 10

What are three requirements to automate service deployment of a VM-Series firewall from an NSX Manager? (Choose three.)

- A. vCenter has been given Palo Alto Networks subscription licenses for VM-Series firewalls
- B. The deployed VM-Series firewall can establish communications with Panorama.
- C. Panorama has been configured to recognize both the NSX Manager and vCenter.
- D. Panorama can establish communications to the public Palo Alto Networks update servers.
- E. The NSX Manager completed the host preparation prior to the VM-Series firewall service deployment

ANSWER: A C D
