Topic Break Down

Topic	No. of Questions
Topic 1, New Update	87
Topic 2, Case Study 1	5
Topic 3, Case Study 2	5
Topic 4, Case Study 3	5
Topic 5, Case Study 4	3
Topic 6, Case Study 5	5
Topic 7, Mixed Questions	183
Total	293

QUESTION NO: 1

You are an app maker developing a canvas app without access to Power BI. You need to integrate charts within your app. Which three types of charts can you add directly to the canvas app? Select three options, each selection adds a complete solution. Note: Each correct selection is worth one point.

- A. pie
- B. area
- C. funnel
- D. column
- E. line

ANSWER: A D E**Explanation:**

You can use line charts, pie charts, and bar charts to display your data in a canvas app.

Add a bar chart to display your data:

1. On the Home tab, add a screen.
2. On the Insert tab, select Charts, and then select Column Chart.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/use-line-pie-bar-chart>

QUESTION NO: 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is deploying Microsoft Power Platform components to streamline a job candidate screening process.

The human resources (HR) representatives of the company plan to attend school career fairs. The HR representatives must qualify and enter potential job candidates into a Power Apps app. The HR representatives must enter the following information for each candidate:

Field name	Data type	Criteria for follow up
Name	Text	No

Degree	Text	Yes
First available hire date	Date	Yes
Initial impression	Integer 0-10	Yes
Resume	Picture	No
Not currently viable	Boolean	Yes
Follow up	Boolean	NA

If a candidate is currently unqualified for a job position but would eventually qualify based on follow-up criteria, the follow-up checkbox must be selected or cleared in the system immediately.

The company plans to create a similar Power Apps app that will contain the same business use case, but for internal employees and promotions.

You need to create a Power Apps app solution to automatically mark the candidate for follow-up.

Proposed solution: Create a custom action that has defined dataflows.

Does the solution meet the goal?

- A. Yes
- B. No

ANSWER: B

Explanation:

Instead, use Common Data Service workflow with a Power Query on the data entity. Note: The Process (Workflow) table/entity reference is a set of logical rules that define the steps necessary to automate a specific business process, task, or set of actions to be performed. Common Data Service workflow support: Filter triggers based on which attributes change - You can control which field changes trigger your automated flows. For example, trigger your flow only when the status field changes while ignoring all other fields that may change. Reference: <https://docs.microsoft.com/en-us/business-applications-release-notes/april19/microsoft-flow/automated-parity-classic-common-data-service-workflows>

QUESTION NO: 3

You have a Power Apps solution that includes three model-driven apps, a business process flow, and a scheduled flow. This solution is deployed in a data center located in the United States.

You are planning to deploy this solution to Canada. To ensure compliance with government regulations applicable to all components of the solution, what actions should you take?

Select the three actions that form part of the solution.

Note: Each correct selection is worth one point.

- A. View results in the Service Trust portal.
- B. Check the results of the Solution checker.
- C. Identify regulations for the region where the tenant resides.
- D. Identify all regulations for the region where the Common Data Service database resides.
- E. Configure data loss prevention (DLP) policies in the Power Platform Admin center.

ANSWER: A D E**Explanation:**

A: The Microsoft Service Trust Portal provides a variety of content, tools, and other resources about Microsoft security, privacy, and compliance practices.

D: The Service Trust Portal contains details about Microsoft's implementation of controls and processes that protect our cloud services and the customer data therein.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal>

QUESTION NO: 4

Your company has enforced Data Loss Prevention (DLP) policies within the environment. After creating a Power Automate flow, you discover that you are unable to activate it. In order to modify the DLP policies and enable the flow activation, which action should you take?

- A. You should make sure that you have the Environment Admin role assigned.
- B. You should make sure that you have the Environment Maker role assigned.
- C. You should make sure that you have the System customizer role assigned.
- D. You should make sure that you have the Portal owner role assigned.

ANSWER: A**Explanation:**

To edit DLP policies, the user must have the Environment Admin role, which allows the management of settings that affect the entire environment. For more information, visit the [official Microsoft documentation on data loss prevention](#).

QUESTION NO: 5 - (HOTSPOT)**HOTSPOT**

You need to resolve the issues found during testing.

Which option should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Issue

Option

Testers see all time entries.

	▼
Hierarchical security	
Security group	
Security role	

Testers are able to edit existing time entries.

	▼
Control property	
Field-level security	
Security role	

Managers cannot see required information.

	▼
Access team template	
Field-level security	
Hierarchical security	

ANSWER:

Answer Area

Issue

Option

Testers see all time entries.

	▼
Hierarchical security	
Security group	
Security role	

Testers are able to edit existing time entries.

	▼
Control property	
Field-level security	
Security role	

Managers cannot see required information.

	▼
Access team template	
Field-level security	
Hierarchical security	

Explanation:

Box 1: Security role

Scenario: Employees must only be able to access their own time tracking records from the app. Testers report that they can see time entries in the Time Tracker app, not just their own.

Box 2: Field-level security

Scenario: Employees must only be able to modify time records for the current and previous day. Testers report that they can edit any existing time entries.

Box 3: Hierarchical security

You use field security tables to apply field-level security, which restricts field access to specified users and teams.

QUESTION NO: 6 - (HOTSPOT)

HOTSPOT

A company uses several forms for biannual performance evaluations. The company conducts the evaluations by using a pen and paper process. The evaluations contain several performance areas that have a score of 1-10. A paragraph explains the score.

The company must scan completed performance evaluations into a Common Data Service entity by using a Power Apps app. The information in the documents must automatically map to entities and convert into quantifiable information.

If any key phrases in the scored topics cause concern, the company must follow a series of actions to prepare for a follow up.

You need to extract the information and perform the actions when the evaluations are scanned.

Which component should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area	Requirement	Component
	Convert the evaluations from images to data	<ul style="list-style-type: none">AI BuilderPower BIDataflowsBusiness rules
	Convert a form processing variable to an integer	<ul style="list-style-type: none">Initialize variableAdd dynamic contentAppend to string variableExtract entities and their types from text
	Use the flow action to convert a form processing variable to an integer	<ul style="list-style-type: none">ScopeDo untilConditionApply to each

ANSWER:

Answer Area

Requirement	Component
Convert the evaluations from images to data	<div style="border: 1px solid black; padding: 2px;"> <div style="text-align: right; border-bottom: 1px solid black;">▼</div> <div style="background-color: #e0f2f1; padding: 2px;">AI Builder</div> <div style="padding: 2px;">Power BI</div> <div style="padding: 2px;">Dataflows</div> <div style="padding: 2px;">Business rules</div> </div>
Convert a form processing variable to an integer	<div style="border: 1px solid black; padding: 2px;"> <div style="text-align: right; border-bottom: 1px solid black;">▼</div> <div style="padding: 2px;">Initialize variable</div> <div style="padding: 2px;">Add dynamic content</div> <div style="padding: 2px;">Append to string variable</div> <div style="background-color: #e0f2f1; padding: 2px;">Extract entities and their types from text</div> </div>
Use the flow action to convert a form processing variable to an integer	<div style="border: 1px solid black; padding: 2px;"> <div style="text-align: right; border-bottom: 1px solid black;">▼</div> <div style="background-color: #e0f2f1; padding: 2px;">Scope</div> <div style="padding: 2px;">Do until</div> <div style="padding: 2px;">Condition</div> <div style="padding: 2px;">Apply to each</div> </div>

Explanation:

Box 1: AI Builder

The object detection component of AI Builder for PowerApps takes a photo or loads an image file to do an object detection scan. On a mobile device, the user chooses between taking a photo or selecting one already available in the device user interface. When an image is selected, the component automatically scans it to identify objects.

Box 2: Extract entities and their types from text

The Entity extraction prebuilt model identifies and classifies key elements from text into pre-defined entities. You can use the prebuilt model out of the box in power apps and power automate.

Box 3: Scope

Scope is a simple way to put similar actions and conditions together like a Stage.

Reference: <https://docs.microsoft.com/en-us/ai-builder/object-detector-component-in-powerapps>
<https://powerapps.microsoft.com/en-us/blog/new-ai-builder-models-are-now-generally-available/>

QUESTION NO: 7

This question is part of a series that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have any correct solution.

After answering a question in this section, you will NOT be able to return to it. Consequently, these questions will not appear in the review screen.

You are developing a canvas app and need to integrate functionality to automatically identify bicycles in photos captured using the camera feature of your app.

Proposed solution: Does the solution meet the goal?

- A. Yes
- B. No

ANSWER: B

Explanation:

Instead of using the proposed solution, you should create an Object Detection custom model to identify bicycles in the images. This can be achieved by utilizing the AI Builder's Object Detector component, which is specifically designed for object detection tasks within Power Apps.

For more information, please refer to the official documentation: [AI Builder Prediction Overview](#) and [Object Detector Component in PowerApps](#).

QUESTION NO: 8

You need to develop a mobile application. What type of app should you build to achieve this?

- A. model-driven app
- B. portal app
- C. Microsoft 365 web app
- D. canvas app

ANSWER: D

Explanation:

A canvas app is a flexible and customizable option suitable for mobile app development. It allows app builders to design the interface and user experience by arranging components freely on a canvas, making it ideal for creating apps that are visually engaging and accessible to a wide range of users. For more information, you can visit the official [Microsoft documentation on accessible canvas apps](#).

QUESTION NO: 9

You have developed a Power Platform solution that stores its data across various well-known cloud services. The requirement is to ensure that the solution can also connect to industry-specific data sources. You decide to create a data policy template.

Will this action help you meet your objective?

- A. Yes, it does

B. No, it does not

ANSWER: B

Explanation:

Creating a data policy template alone will not ensure your solution can connect to industry-specific data sources. A data policy template is used in Power Platform to define and manage how data connectors interact with data. However, enabling connections to specific data sources typically requires configuring connectors that are compatible with those data sources, not just setting a policy template. For more information on connectors, visit [Microsoft Power Platform documentation](#).

QUESTION NO: 10

You are tasked with implementing logic in a Power Apps application to handle cases of lost sales. Which approach should you take to achieve this?

- A. Set the probabilities field to zero percent.
- B. Define a business rule for the Sales Log edit form.
- C. Enable field security on the Won/Lost field.
- D. Create a formula for the Description field that uses the Update function.

ANSWER: B

Explanation:

Scenario: Requests for quotes are currently stored in a Sales Log workbook. The workbook includes the following information:

- Status of the Request for Quote (RFQ) with the values of Won, Lost, No Bid, and Cancelled

Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fastchanging and commonly used rules.

Business rules defined for an entity apply to both canvas apps and model-driven apps if the entity is used in the app.

Reference: <https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule>

QUESTION NO: 11

You are in the process of developing an application for a company. As part of this development, you need to assess the default solution. Which of the following behaviors should you expect regarding the default solution? Select two options that each present a complete solution.

Note: Each correct selection is worth one point.

- A. You can change the prefix of the publisher of the default solution
- B. If you create a Power Automate flow in a solution, the flow uses the prefix defined in the publisher
- C. If you create an environment variable in a solution, the variable uses the prefix defined in the publisher
- D. You can change the version number of the default solution

ANSWER: A C

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/customerengagement/on-premises/customize/use-solutions-for-your-customizations?view=op-9-1>

QUESTION NO: 12 - (DRAG DROP)

A company uses Microsoft Power Platform. All users in the company have read/write and create access to SharePoint.

You create a canvas app that displays data from a SharePoint list. A group of users must use the app without the ability to change the data source.

You need to share the app with the users.

What should you do? To answer, drag the appropriate actions to the correct components. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows the configuration interface for a solution. The 'Actions' pane on the left contains four items: 'Send all users an email invitation.', 'Enable Can use permission.', 'Set the users as co-owners.', and 'Enable Can edit permission.'. The 'Answer Area' in the center is currently empty. The 'Component' pane on the right lists 'Canvas app' and 'SharePoint connection'. The 'Action' pane on the right has two empty slots for dragging actions.

ANSWER:

The screenshot shows the configuration interface with the correct answer applied. The 'Action' pane on the right now contains two items: 'Send all users an email invitation.' and 'Enable Can use permission.'.

Explanation:

Actions	Answer Area	Component	Action
Send all users an email invitation.		Canvas app	Send all users an email invitation.
Enable Can use permission.		SharePoint connection	Enable Can use permission.
Set the users as co-owners.			
Enable Can edit permission.			

QUESTION NO: 13

A company is implementing the Microsoft Power Platform to assist with the consolidation of onsite inspections and audits of retail stores. Currently, the data used for retail store inspections is located across multiple systems. The canvas app must utilize a single database to view and record all data involved in the inspection process. You need to design the solution. What are the three capabilities you should implement? Each correct answer represents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Use an embedded access management framework for user security.
- B. Execute real-time data operations against external data sources through virtual entities.
- C. Use Azure Active Directory for access management.
- D. Store data used by a Power Apps app on both iOS and Android mobile platforms.
- E. Use Azure Data Lake storage to host the transactional data.

ANSWER: B C E

Explanation:

Virtual tables, also known as virtual entities, enable seamless integration of data residing in external systems by representing that data as tables in Microsoft Dataverse without replicating the data and often without custom coding.

Authentication to a Gen 1 DataLakeStore Account uses OAuth 2.0 in Azure AD for security.

Visit the official documentation for more details: <https://learn.microsoft.com/en-us/power-apps/maker/common-data-service/data-platform-integrate-external-data>

QUESTION NO: 14 - (DRAG DROP)

You are in the process of designing a new multi-page canvas app. The app connects to an outside data source to load tabular data.

all screens within the canvas app must have access to the data after it is loaded. You want to make sure that data retrieval from the data source for the app is kept to a minimum.

You need to configure the use of a suitable data store.

Which of the following options could you make use of? Answer by dragging the correct options from the list to the answer area.

Select and Place:

Options

Answer

Collection

Global variable

Context variable

Environment variable

ANSWER:

Options

Answer

Global variable

Context variable

Collection

Environment variable

Explanation:

Reference: <https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/working-with-data-sources>

QUESTION NO: 15

An automobile company utilizes Power Apps and employs a model-driven app to efficiently manage its customers and repair operations.

The Customer table includes a custom text column labeled Best time to call. It's necessary for this Best time to call column to be visible alongside the customer's name on the Repair form for the employees.

Which two actions are essential to update the model-driven app so that it displays the Best time to call column correctly?

NOTE: Each selected option is a part of the solution and carries one point each.

- A. Add The Best time to call column to the quick view Repair form.
- B. Create a quick view form for the Repair table.
- C. Create a quick view form for the Customer table.

D. Add the Best time to call column to the quick view Customer form.

ANSWER: C D

Explanation:

To display a specific column from a related table in a model-driven app, quick view forms are used. First, create a quick view form for the Customer table to ensure that its columns can be pulled into other views easily. Secondly, add the required column, in this case, Best time to call, to the quick view Customer form. These steps will make the column available in the Repair form where it needs to be displayed. For more details, refer to the official documentation: [quick view forms in a model-driven app](#).
