QUESTION NO: 1

A user is given access to a service that gives them access to cloud-hosted physical and virtual servers, storage, and networking.

Which NIST cloud service model is this?

- A. IaaS
- B. SaaS
- C. PaaS
- D. CaaS

ANSWER: A**QUESTION NO: 2**

What is a key benefit of Cortex XDR?

- A. It acts as a safety net during an attack while patches are developed.
- B. It secures internal network traffic against unknown threats.
- C. It manages applications accessible on endpoints.
- D. It reduces the need for network security.

ANSWER: B**QUESTION NO: 3**

Web 2.0 applications provide which type of service?

- A. SaaS
- B. FWaaS
- C. IaaS
- D. PaaS

ANSWER: D

QUESTION NO: 4

You received an email, allegedly from a bank, that asks you to click a malicious link to take action on your account.

Which type of attack is this?

- A. Whaling
- B. Spamming
- C. Spear phishing
- D. Phishing

ANSWER: D**QUESTION NO: 5**

Which Palo Alto Networks subscription service complements App-ID by enabling you to configure the next-generation firewall to identify and control access to websites and to protect your organization from websites hosting malware and phishing pages?

- A. Threat Prevention
- B. DNS Security
- C. WildFire
- D. URL Filtering

ANSWER: D**QUESTION NO: 6**

In which two cloud computing service models are the vendors responsible for vulnerability and patch management of the underlying operating system? (Choose two.)

- A. SaaS
- B. PaaS
- C. On-premises
- D. IaaS

ANSWER: A B

QUESTION NO: 7

You have been invited to a public cloud design and architecture session to help deliver secure east west flows and secure Kubernetes workloads.

What deployment options do you have available? (Choose two.)

- A. PA-Series
- B. VM-Series
- C. Panorama
- D. CN-Series

ANSWER: A B**QUESTION NO: 8**

What are three benefits of SD-WAN infrastructure? (Choose three.)

- A. Improving performance of SaaS applications by requiring all traffic to be back-hauled through the corporate headquarters network
- B. Promoting simplicity through the utilization of a centralized management structure
- C. Utilizing zero-touch provisioning for automated deployments
- D. Leveraging remote site routing technical support by relying on MPLS
- E. Improving performance by allowing efficient access to cloud-based resources without requiring back-haul traffic to a centralized location

ANSWER: B C E**Explanation:**

Simplicity: Because each device is centrally managed, with routing based on application policies, WAN managers can create and update security rules in real time as network requirements change. Also, when SD-WAN is combined with zero-touch provisioning, a feature that helps automate the deployment and configuration processes, organizations can further reduce the complexity, resources, and operating expenses required to spin up new sites. • **Improved performance:** By allowing efficient access to cloud-based resources without the need to backhaul traffic to centralized locations, organizations can provide a better user experience.

QUESTION NO: 9

Which two pieces of information are considered personally identifiable information (PII)? (Choose two.)

- A. Birthplace
- B. Login 10

C. Profession

D. Name

ANSWER: A D

QUESTION NO: 10 - (DRAG DROP)

DRAG DROP

Match the description with the VPN technology.

Select and Place:

Primarily used for secure remote client VPN rather than for site-to-site VPN tunnels.		Generic Routing Encapsulation
Supported by most operating systems and provides no encryption by itself.		Layer 2 Tunneling Protocol
A tunneling protocol developed by Cisco Systems that can various network layer protocols inside point-to-point links.		Internet Protocol Security
A tunneling protocol that uses the Internet Key Exchange (IKE) to start a connection		Secure Socket Tunneling Protocol

ANSWER:

Primarily used for secure remote client VPN rather than for site-to-site VPN tunnels.	A tunneling protocol developed by Cisco Systems that can various network layer protocols inside point-to-point links.	Generic Routing Encapsulation
Supported by most operating systems and provides no encryption by itself.	Supported by most operating systems and provides no encryption by itself.	Layer 2 Tunneling Protocol
A tunneling protocol developed by Cisco Systems that can various network layer protocols inside point-to-point links.	A tunneling protocol that uses the Internet Key Exchange (IKE) to start a connection	Internet Protocol Security
A tunneling protocol that uses the Internet Key Exchange (IKE) to start a connection	Primarily used for secure remote client VPN rather than for site-to-site VPN tunnels.	Secure Socket Tunneling Protocol

Explanation:
