Topic Break Down

Topic	No. of Questions
Topic 1, Exam Pool A	195
Topic 2, Exam Pool B	193
Topic 3, Exam Pool C	193
Topic 4, Exam Pool D	184
Total	765

QUESTION NO: 1

The source platform supported by Rainbow can be x86 architecture or Kunpeng architecture (judgment)

- A. TRUE
- B. FLASE

ANSWER: B**QUESTION NO: 2**

(Multiple Choice) Which of the following are the usage modes of Huawei Full Memory Desktop?

- A. Share Mode
- B. Copy Mode
- C. Link Mode
- D. Pool Mode

ANSWER: B C**QUESTION NO: 3**

In Fusion compute, a virtual machine is created by importing a virtual machine. Which of the following file formats is not supported

- A. ovf
- B. vmdk
- C. xml
- D. ova

ANSWER: B**QUESTION NO: 4**

In the ManageOne operation and maintenance plane, when the administrator performs routine maintenance or handles user requests, the

Tenant resource page, query resources according to requirements. After querying the required resources, click the required query

The resource name of , which of the following can be seen on the resource details page? (many)

- A. Basic information about the resource
- B. alarm
- C. Components
- D. Topology

ANSWER: A B C D

QUESTION NO: 5

In the Huawei Desktop Cloud Solution, which of the following is incorrect about the description of linked-clone desktop features?

- A. Linked clones offer the advantages of fast virtual machine creation and a small storage footprint
- B. Linked-clone desktops have higher computing power than ordinary virtual machines
- C. Linked clone is a technology that groups and maps a parent volume and a differential volume into a linked clone volume
- D. Linked-clone desktop pools provide desktop maintenance functions such as unified software update and unified system restore, greatly reducing maintenance costs

ANSWER: B

QUESTION NO: 6

(multiple choice)FusionSphereIn the server virtualization scenario, user services are networked separately, and which of the following network planes must be connected to

the computing node host?

- A. storage plane
- B. management plane
- C. VIMscontrol plane
- D. business plane

ANSWER: B D

QUESTION NO: 7

The following Fusion Compute Cluster rules group policy does not exist?

- A. Mutually exclusive virtual machine
- B. ban virtual machines
- C. Aggregate virtual machines
- D. virtual machine to host

ANSWER: B

QUESTION NO: 8

FusionStorage block storage adopts distributed cluster management mode, the system is fully redundant, and there is no single point

Fault. Supports two data redundancy protection mechanisms: multiple copies and EC (Erasure Coding).

Which of the descriptions of copy and EC is wrong?

- A. The Erasure Coding technology is applied to realize the RAID function between nodes, and the configuration of the protection level is supported.
Any node or any disk failure without affecting data integrity.
- B. Multiple copies can ensure that in the case of server failure, cabinet failure, or even computer room failure, the data is still While not lost, accessible.
- C. The application of the multi-copy mechanism can copy 2 to 3 copies of the same data, and place different copies in different
On the server, on the cabinet, or even in a different computer room.
- D. Compared with the EC mechanism, the reliability of multiple copies is not reduced, or even higher than the EC mechanism, while the space utilization rate increased significantly.

ANSWER: D

QUESTION NO: 9

(Multiple choice) Business migration is a high-risk operation. Which of the following factors will affect business migration?

- A. business type
- B. OS type
- C. Migration method
- D. Web environment

ANSWER: A B C D

QUESTION NO: 10

(multiple choice)FusionSphere OpenStackBy which of the following dimensions can a logical host befc-nova-computePerform performance evaluation, select the logical host with the best overall performance, and schedule cluster resources?

- A. vCPUUtilization
- B. vCPUreservation rate
- C. remaining memory resources
- D. vCPUremaining resources

ANSWER: A B C D**QUESTION NO: 11**

What hardware requirements to meet when installing rainbow migration server

- A. CPU: 4nuclear and above
- B. memeory: total memory4Gand above
- C. disk, the installed partition must have4Gabove available space
- D. GPU: Tesla T4

ANSWER: A B C**QUESTION NO: 12**

In useRainbowspecialwindowsMigrating virtual machines toHCSIn the platform scenario, which parameters of the destination virtual machine need to be configured by the migration personnel when creating a migration task?

- A. The port used by the destination virtual machine to communicate with the source virtual machine
- B. The number of disks of the destination virtual machine
- C. The disk capacity of the destination virtual machine
- D. destination virtual machinelPaddress

ANSWER: D**QUESTION NO: 13**

VLB is an indispensable component in the Fusion access system

- A. TRUE
- B. FALSE

ANSWER: B

QUESTION NO: 14

Use Huawei BCManager eBackup for data backup and use the LAN-Free networking mode. When the user backs up a virtual. What does the production storage do when it's a virtual machine?

- A. Send backup data to backup storage
- B. Send backup data to backup server
- C. Send backup data to a virtualized environment
- D. Send backup data to backup agent

ANSWER: D

QUESTION NO: 15

BringGPUPass-through virtual machines do not support live migration.

- A. TRUE
- B. FALSE

ANSWER: A

QUESTION NO: 16

On the Rainbow server, after checking the source, it is found that there is a gray background and a white color lock before its name.

What does it stand for? (single choice)

- A. The task corresponding to the source has been completed and cannot be modified
- B. The source information is incorrectly configured, and the migration task cannot be created
- C. The source terminal has obtained the license at the end, and cannot create a migration task
- D. The task corresponding to the source terminal is being executed and cannot be modified

ANSWER: D

QUESTION NO: 17

(Multiple choice) The following about Fusion compute middle VLAN Description of the pool, which options are correct?

- A. delete VLAN segment, there must be a start VLAN ID and end VLAN ID, Delete the entire VLAN part
- B. if there is VLAN The pool can create a port group.
- C. One DVSDifferent in VLAN between pools VLAN ID cannot overlap
- D. create VLAN Start must be set when pooling VLAN ID and end VLAN ID

ANSWER: A B C D**QUESTION NO: 18**

The sequence design of business migration is very important. The following description of the sequence of business migration is correct

What are the items? (multiple choice)

- A. According to the impact on the business from small to large
- B. According to the business interruption time from short to long
- C. According to business complexity, from easy to difficult
- D. According to the migration risk from low to high

ANSWER: A C D**QUESTION NO: 19**

UltraVR supports centralized and distributed deployment. Which of the following statements about centralized and distributed deployment is wrong?

- A. centralized deployment scenario, UltraVR server is deployed at the production site and disaster recovery site
- B. Centralized deployment scenario, UltraVR server is deployed at the disaster recovery site
- C. In the distributed deployment scenario, the UltraVR server is deployed at the disaster recovery site
- D. In the distributed deployment scenario, the UltraV monthly server is deployed on the production site and the disaster recovery site

ANSWER: A C**QUESTION NO: 20**

When using Rainbow to migrate virtual machines to HCS, which of the following operations are feasible? (many)

- A.** When the source terminal is a Windows virtual machine and port 445 is not opened, the migration task can also be completed by manually installing WinSrcAgent.
- B.** While migrating the virtual machine, you can upgrade the version of Centos, for example, upgrade Centos 6.5 to Centos7.0.
- C.** The source virtual machine IP address can use IPv4 or IPV6.
- D.** The firmware type of the source virtual machine is UEFI. When registering the corresponding image, you need to check the UEFI option.

ANSWER: A C D
