#### QUESTION NO: 4

Which statement is true regarding object copy across folders in the Repository Manager?

- A. You can copy an object even though it has been checked out or has a write-intent lock.
- B. The Repository service will lock the repository database until the objects have been copied.
- C. It is best practice to export the objects as XML prior to performing the copy operation.
- D. You must have write permissions in both the origin folder and the destination folder.

**ANSWER: B**

#### QUESTION NO: 5

Which kinds of objects are stored in a PowerCenter Repository?

- A. Mapping objects, sources and targets, workflow objects, operating system semaphores.
- B. Mapping objects, sources and targets, workflow objects, workflow run information.
- C. Source data, sources and targets, workflow objects, workflow run information.
- D. Mapping objects, target data, workflow objects, workflow tasks.

**ANSWER: B**

#### QUESTION NO: 6

When is it advisable to migrate PowerCenter repository objects between domains using the XML export-import method?

- A. When the master gateway node on the domains are running on different operating systems.
- B. When the domain databases are in different database types (Oracle and Sybase, for example).
- C. When the PowerCenter Repository Manager cannot access the repositories in both domains at the same time.

D. When the license key for Team Based Development - Deployment Groups is not available.

**ANSWER: B**

### QUESTION NO: 7

Which of the following statements is true in reference to License Keys?

- A. A license key may be assigned to a Repository Service running in normal mode.
- B. A license key may be assigned to a Repository Service running in exclusive mode.
- C. A license key may be assigned to a Repository Service that is disabled
- D. A license key may only be assigned to a service at install time.

**ANSWER: A**

#### Explanation:

### QUESTION NO: 8

When copying and replacing folders in PowerCenter version 9.10 , which of the following statements is true?

- A. The move is performed in two steps. The first step involves copying the source folder contents into temp tables. At this point the target repository is in a read-only mode. The second step involves moving the information from the temp tables into the target folder. During this step the repository is locked.
- B. The move is performed in one step. This involves copying the source folder contents into the target folder. During this step the repository is locked.
- C. The move is performed in two steps. The first step involves copying the source folder contents into XML files. The second step involves importing the XML files into the target folder. During this step the repository is locked.
- D. The Source Folder is copied into the target folder. No locks are placed on the target repository.

**ANSWER: D**

**QUESTION NO: 9**

You enter the user name Administrator as the required Domain Administrator user during the installation of a new Informatica domain.

What is the result?

- A.** This action is not permitted because the user Administrator is already built into the domain. You must supply another user name to be the Domain Administrator.
- B.** The Domain Administrator becomes the default Administrator. The password you assign to the Domain Administrator is assigned to the default Administrator.
- C.** The Domain Administrator becomes the default Administrator, but you must supply the current Administrator password or the Installation cannot proceed.
- D.** Two users named Administrator now exist, one of which is a Domain Administrator (with the password you supply) and the other is the default Administrator super user with the default password.

**QUESTION NO: 10**

If you attempt to delete a user who is the owner of a repository folder, what will happen?

- A.** The folder is deleted.
- B.** The folder becomes owned by Administrator.
- C.** You will be prompted to assign another owner to the folder.
- D.** This operation is not allowed.

**ANSWER: B**
